

AKHIL KALLAM

Senior Software Engineer

(201) 665-8729 • kallam.akhil91@gmail.com • LinkedIn • Plano, TX

SUMMARY

Senior Software Engineer with **10+ years** of experience delivering scalable, secure, high-performance applications across Food & Beverages, Payment, and Healthcare. Currently leading the **eB2B Products & Promotions** platform at PepsiCo — enabling global markets across LATAM, India, NA, and Australia. Skilled in **Java, Spring Boot, Apache Kafka, hybrid SQL/NoSQL, microservices, Azure/AWS**, and AI-assisted development. Track record of cross-functional delivery with Product, UX, DevOps, and international teams at scale.

SKILLS

Languages

Java, JS, TypeScript, React, AngularJS, SQL

Frameworks

Spring Boot, Spring MVC, Hibernate, REST APIs

Databases

PostgreSQL, MySQL · MongoDB, Couchbase (Hybrid)

Messaging

Apache Kafka, Event-Driven Architecture

Cloud

Azure (AKS, ASE), AWS, Docker, Kubernetes

DevOps/CI/CD

Jenkins, Git, AKS Pipelines, Automated Deploy

Security

Okta (SSO/OAuth), Pen Testing, Qualys, Fortify

Observability

AppDynamics, ELK Stack, Autosys, Full Story

AI Tools

GitHub Copilot, ChatGPT, Prompt Engineering

Practices

Agile/Scrum, JIRA, Cross-functional Leadership

EDUCATION

UNC Charlotte

M.S. Computer Science · May 2016

Andhra University

B.E. Computer Science · Apr 2013

WORK EXPERIENCE

PepsiCo

Apr 2023–Present | Plano, TX

Software Engineer Sr. Analyst

- Led end-to-end development of the **eB2B Products & Promotions** platform — core B2B module for trade promotions and product catalog management for Key Account Managers globally.
- Led migration from **Pimcore to domain-driven microservices**, decoupling product catalog and CEP portal into independently deployable services; improved data retrieval, catalog sync, fault tolerance, and deployment flexibility.
- Architected **event-driven workflows using Apache Kafka** for real-time product and promotion event streaming across microservices, reducing end-to-end processing latency.
- Designed a **hybrid SQL/NoSQL data strategy** (relational for transactions, NoSQL for catalog/session), optimizing read/write performance for high-volume B2B workloads.
- Enabled **4 global markets (LATAM, India, NA, Australia)** via configurable market-aware UI and region-specific business logic, cutting rollout time from **10 days to 2 days**.
- Boosted application performance by **5x**; migrated to **AKS** (Docker, Kubernetes, Jenkins CI/CD); integrated Okta SSO; leveraged GitHub Copilot & ChatGPT to accelerate team delivery.

Verifone Inc.

Nov 2018–Apr 2023 | Chicago, IL

Software Development Engineer

- Architected and implemented an **Integrated Deployment System** that automated package and cryptographic key downloads to payment terminals over the internet — eliminating the need for operators to manually side-load packages via USB drives at each terminal, cutting deployment effort by **20x**.
- Identified and resolved critical **process gaps between deployment and operations teams** at deployment centers — standardized handoff workflows, improved coordination protocols, and reduced terminal provisioning errors across global rollouts.
- Partnered with hardware, software, and security teams to architect new application features (schema design, business logic, RESTful APIs); led root cause analysis and performance tuning; provided 24/7 on-call support for global deployment operations.

Deloitte

Oct 2017–Oct 2018 | Nashville, TN

Software Developer

- Developed and integrated multiple **third-party demographic APIs** for a critical state government client, enforcing strict data integrity and consistency across distributed data sources in a high-stakes public sector environment.
- Built RESTful web services, MVC components, and validation workflows to reconcile demographic data across providers, preventing data corruption and ensuring compliance with state reporting requirements.
- Configured and managed batch jobs for recurring data analysis and operational reporting across all phases of the SDLC.

Infosys

Sep 2013–Dec 2015 | Bengaluru, India

Senior Software Engineer

- Served as **production support engineer for Goldman Sachs** client — monitored and maintained mission-critical financial workflows using **Autosys** for batch scheduling and job dependency management across complex pipelines.
- Monitored workflow failures across financial systems using ELK Stack and custom dashboards; collaborated with L1/L2 support teams to conduct root cause analysis, resolve production incidents, and fix recurring process issues.
- Designed and developed a regional data monitoring dashboard providing actionable operational insights; contributed to software development and quality assurance across multiple project deliverables.
